

"THE NEW NORMAL" WITH COVID-19

LIGHTING PRACTICES TO FOLLOW DURING & AFTER COVID-19 THAT SUPPORT A CLEAN INDOOR ENVIRONMENT.

SOCIAL DISTANCING SIGNS

Get back to business with high visibility social distancing signs to reinforce safe behaviors inside your building. These signs will encourage customers and employees to practice social distancing and to wear a mask when inside. This will help to prevent the spread of the disease and create a more comfortable indoor environment.

TOUCHLESS LIGHTING

Hands free technology was once a luxury, but with COVID-19 – this technology has become a necessity. Luckily, cost-effective touchless lighting is available today in the form of occupancy sensors. These sensors will automatically turn on the fixtures when detecting a presence and will turn off (or dim) when the space is unoccupied.

SANITATION LISTED LIGHTING

Sanitation Listed lighting fixtures have traditionally been used in the food/drink industry. Now as we try to combat COVID-19 these luminaires will be required in a wider variety of applications. Every industry must increase their efforts at cleaning and disinfecting their facilities more frequently to keep their employees and the public safe. With high-pressure wash-downs and the need for harsher cleaning products using Sanitation Listed lighting will not only support the overall cleanliness and safety of the indoor area but also maintain the integrity of your lighting.
